Date of Submission: April 28, 2026

Quiz # 02

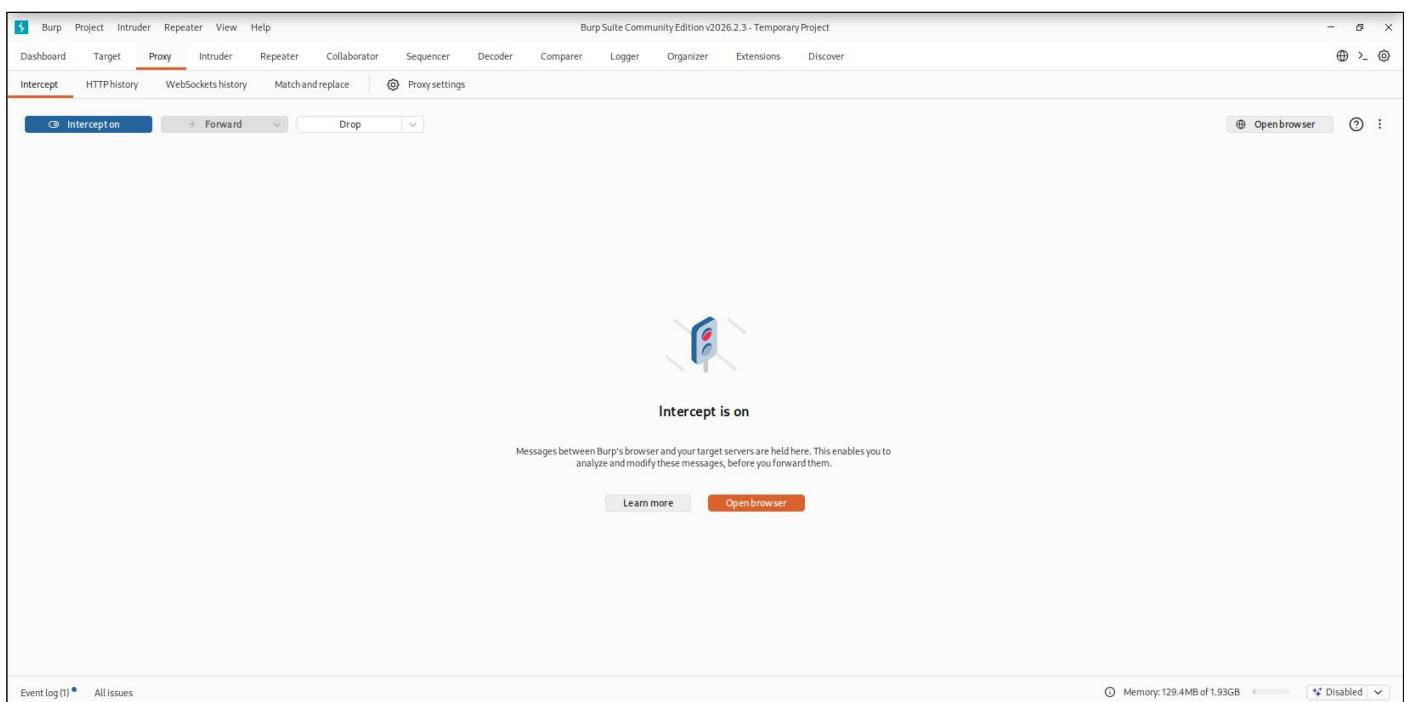

Task 1: Intercept HTTP Requests

1. Configure Proxy:

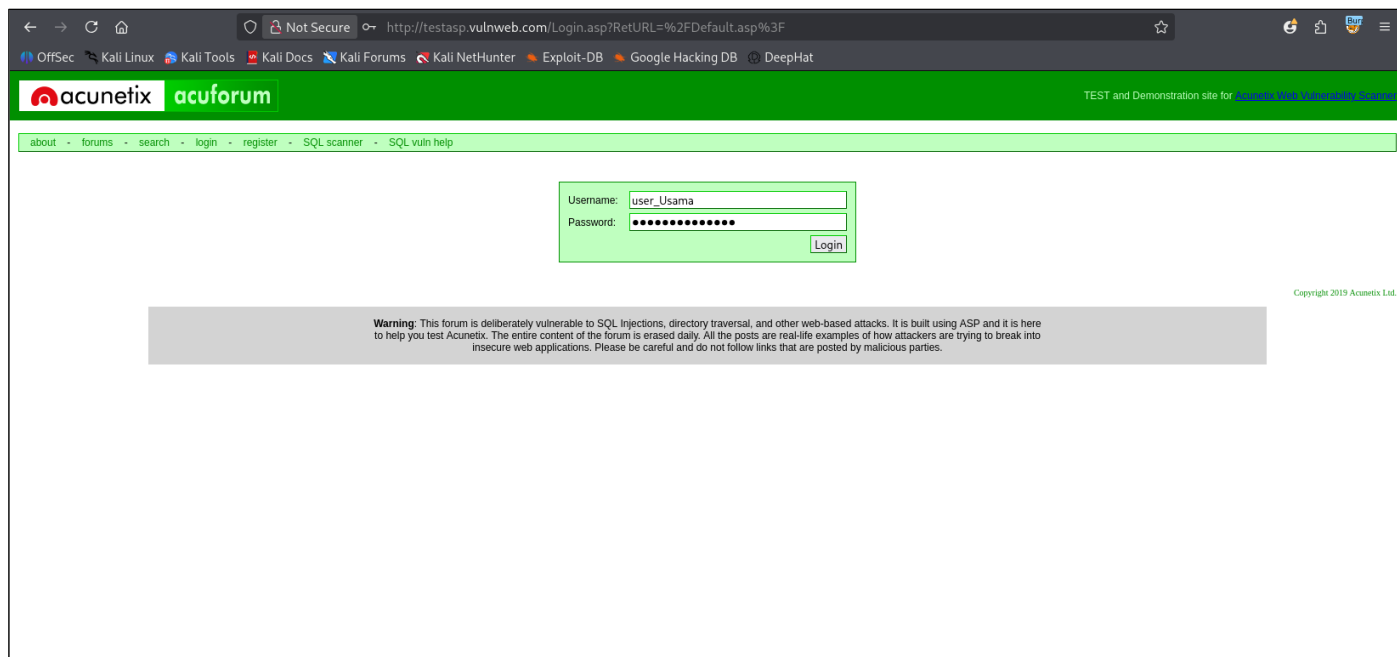

Use the FoxyProxy site to configure the proxy.

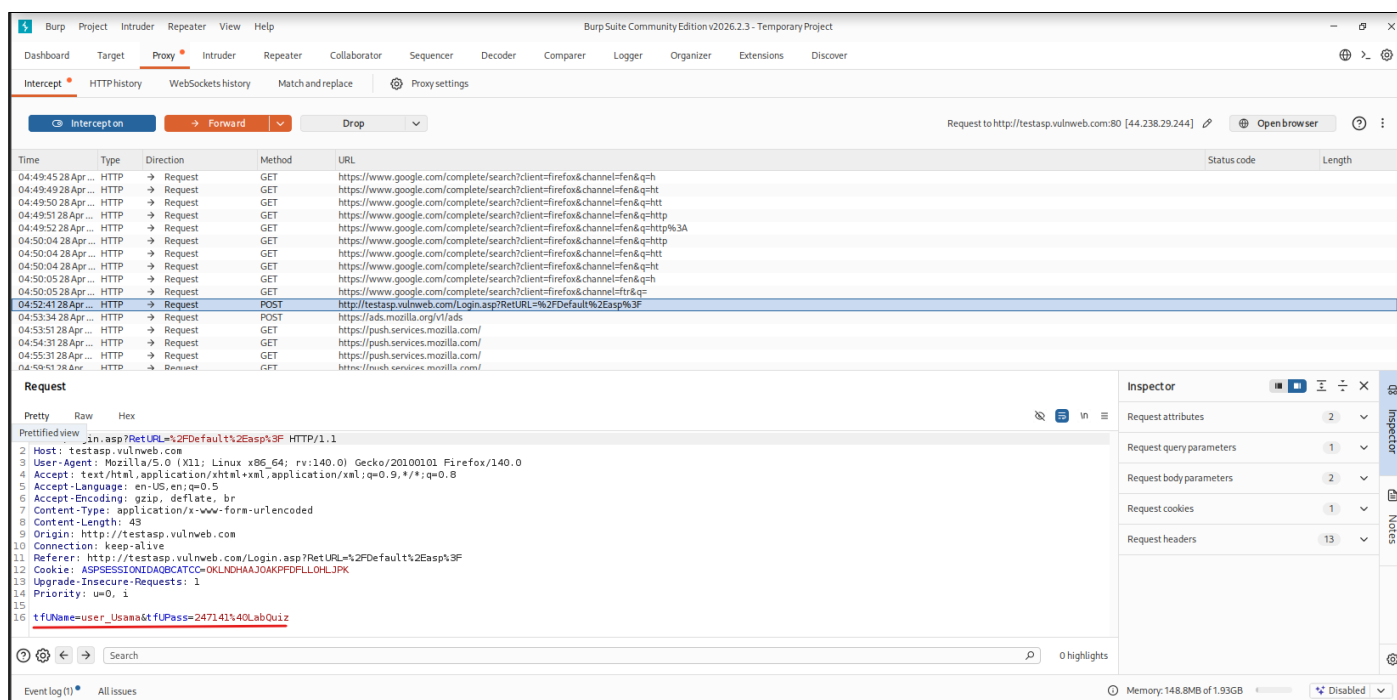

2. Turn on Intercept

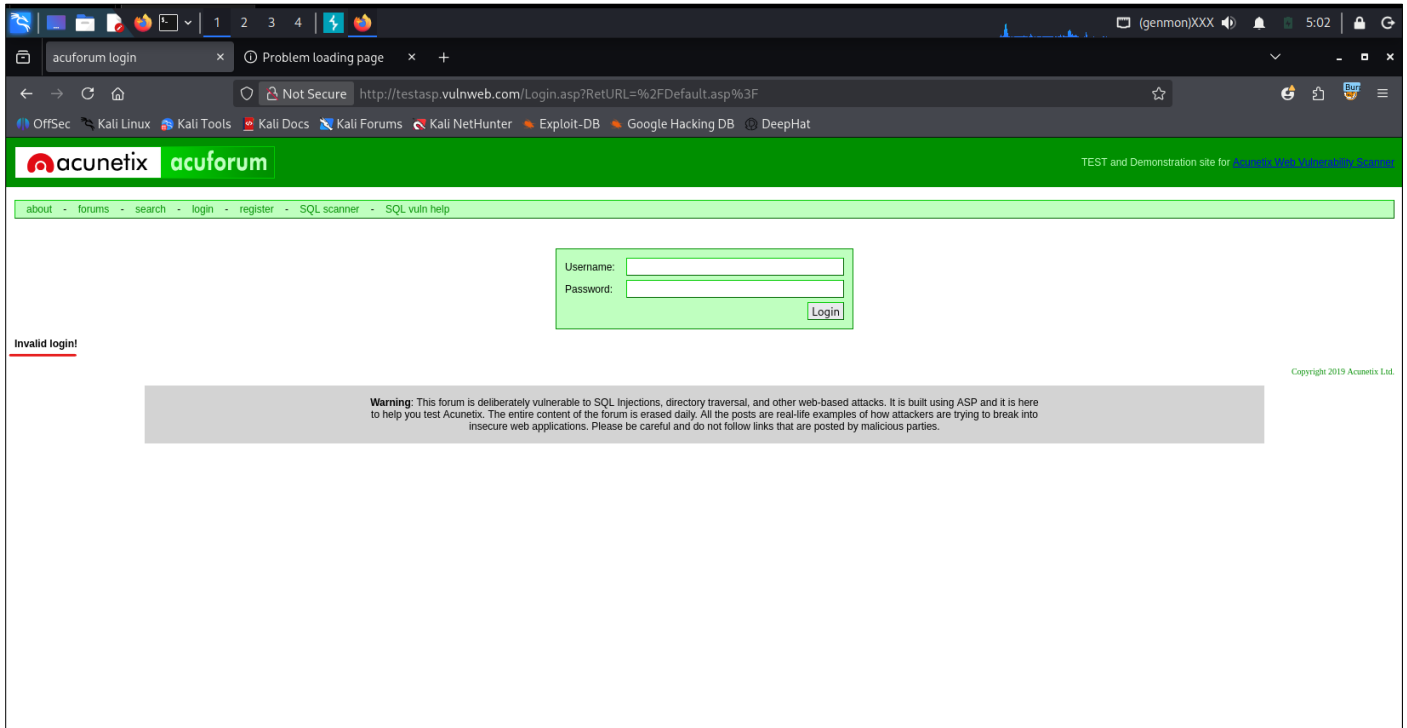

3. Submit Login

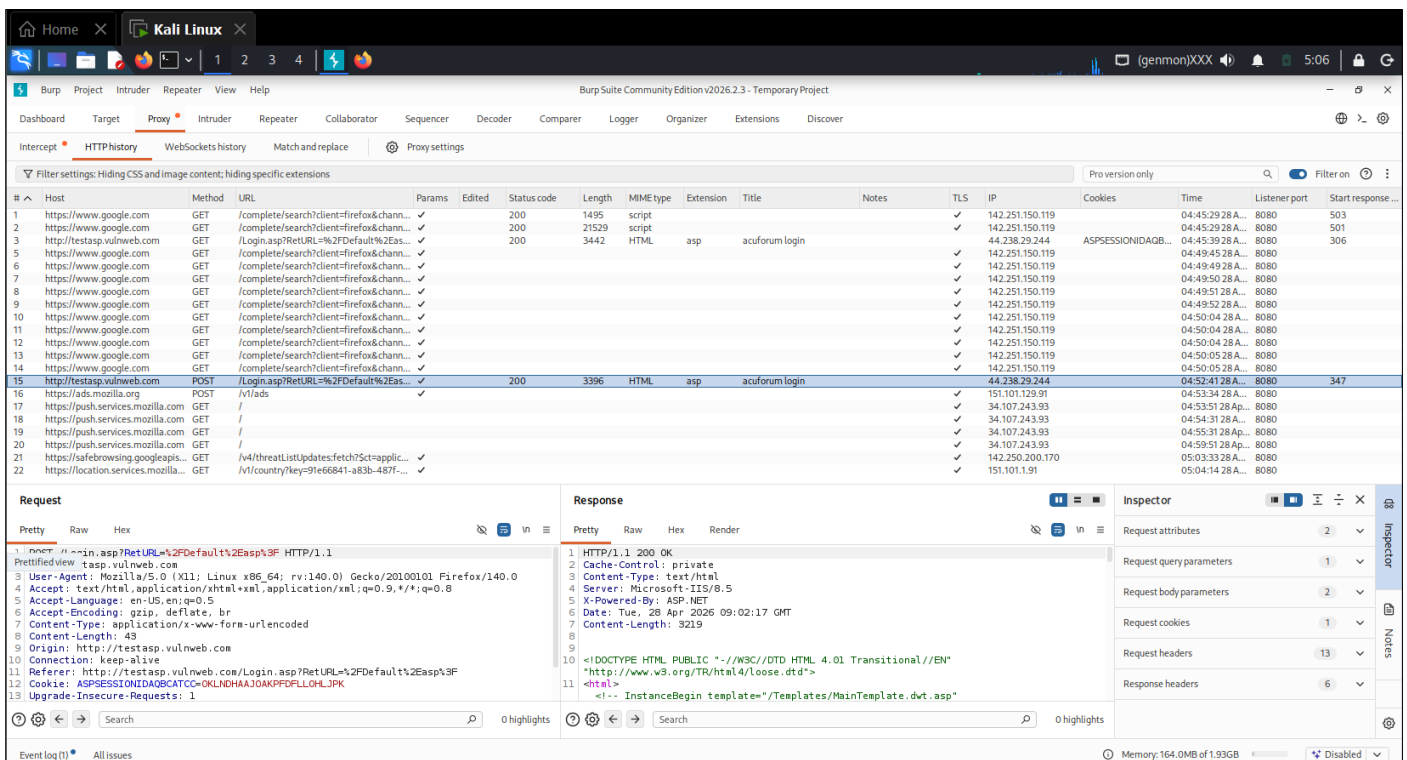

4. Intercepted Request

5. Forward the request

6. View in HTTP history

Task 2: Modify Request Parameters

1. Intercept the Request

Burp Suite Community Edition v2026.2.3 - Temporary Project

Intercept tab selected. Request to <http://testasp.vulnweb.com:80> [44.238.29.244] Open browser

Time	Type	Direction	Method	URL	Status code	Length

3. Modify and Send

Modified the password from 247141@LabQuiz to 247141@LabAssignment.

4. Response after modification

Explanation:

The login request to `http://testasp.vulnweb.com` was intercepted using Burp Suite's proxy while submitting credentials on the login page. The intercepted POST request contained two parameters in the request body —

tfUName=user_Usama and tfUPass=247141%40LabQuiz. This request was then sent to the Repeater tool for parameter manipulation. In the Repeater tab, the password parameter value was modified from 247141%40LabQuiz to 247141%40LabAssignment while keeping the username unchanged, and the modified request was forwarded to the server by clicking Send. The server responded with HTTP/1.1 200 OK, confirming that it accepted and processed the tampered request without any validation or integrity check. This demonstrates a parameter tampering vulnerability where the application blindly trusts client-supplied parameter values without any server-side verification, allowing an attacker to modify request data before it reaches the server.

Task 3: Analyze Response Data

1. Analyzing the Request & Response

The screenshot displays the Burp Suite interface with the Repeater tab active. The target is set to `http://testasp.vulnweb.com`. The request is a POST to `/Login.asp?RetURL=%2FDefault%2Easp%3F` with a modified password parameter `tfUPass=247141%40LabAssignment`. The response is an HTTP/1.1 200 OK with headers including `Cache-Control: private`, `Content-Type: text/html`, `Server: Microsoft-IIS/8.5`, `X-Powered-By: ASP.NET`, `Date: Tue, 28 Apr 2026 09:20:04 GMT`, and `Content-Length: 3219`. The response body contains HTML code for a login page, including a table with a background color and a link to `https://www.acunetix.com/`.

2. Analyze Response Header

Response	
Pretty	Raw
1	HTTP/1.1 200 OK
2	Cache-Control: private
3	Content-Type: text/html
4	Server: Microsoft-IIS/8.5
5	X-Powered-By: ASP.NET
6	Date: Tue, 28 Apr 2026 09:20:04 GMT
7	Content-Length: 3219
